DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1 and 2 in Paper No. 5 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "irregular shape" in claim 1 is unclear, which renders the claim vague and indefinite. It is unclear from the claim language what is meant by irregular shape, is it a specific shape or can it be any shape.

The phrase "30.0 to 1.5 μm " in claim 1 is unclear, which renders the claim vague and indefinite. Ranges must go from the smaller value to the larger value.

The phrase "100.0 to 10.0 μm " in claim 2 is unclear, which renders the claim vague and indefinite. Ranges must go from the smaller value to the larger value.

Clarification/correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakajima et al. (USPN 5,026,590).

Nakajima et al. discloses a sheet or substrate (Figures 1 and 2a-b, #2) with a coated resin layer (Figures 1 and 2a-b, #3) formed from a thermoplastic material (Column 5, lines 67 – 68 and Column 7, lines 16 - 21) on one side of the substrate to make a transfer pattern. The flat surface contains particles with a diameter, height, of 1 to 20 μm (Column 4, lines 32 – 36), giving a roughness between 1 to 20 μm .

Regarding “to form a resin coating having an irregular shape by casting from a solution of a reactive or thermoplastic resin or a thermally molten composition” in claim 1, the determination of patentability for a product-by-process claim is based on the product itself and not on the method of production. If the product in the product-by-process claim is the same or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. *In re Thorpe*, 227 USPQ 946, 966 (Fed. Cir. 1985) and MPEP

Art Unit: 1772

§2113. In this case, the limitation of *** is a method of production and therefore does not determine the patentability of the product itself. Process limitations are given little or no patentable weight. The method of forming the product is not germane to the issue of patentability of the product itself. Further, when the prior art discloses a product which reasonably appears to be either identical with or only slightly different than a product claim in a product-by-process claim, the burden is on the Applicant to present evidence from which the Examiner could reasonably conclude that the claimed product differs in kind from those of the prior art. *In re Brown*, 459 F.2d 531, 173 USPQ 685 (CCPA 1972); *In re Fessman*, 489 F.2d 742, 180 USPQ 324 (CCPA 1974).
